

TABLE NOTES

[1] HEIGHT

The height dimensions shown in table are measured from either the top of the legs (ACTUAL TANK columns) or the floor (WITH LEGS columns) up to the tank top.

The height of a cover must be added to either:

- the “**INNER TANK | WITH LEGS**” for Single Wall Day Tanks, or
- the “**OUTER SHELL | WITH LEGS**” for Double Wall Day Tanks.

Cover heights depend upon number and/or size of pumps and motors. A cover will be one of the following:

- 12” (Standard, Single Pump and Motor), 16”, 20”, 24”, 32”, 36”, or other special size. (Note - add ½” to height for mounting.)
- Example - A PY275DW with a single standard pump and motor overall height is 51.5” (from table) + 12” (standard cover) + 0.5” (mounting) = 64.0”

[2] DEPTH

The legs of the Single Wall day tank or the outer shell of Double Wall day tanks are extended 3 inches on each end increasing the overall length or depth by 6 inches.
