

An 8000 GVW Tandem Trailer, Model Number PTT8000, With A 150 Gallon Sub-Base Tank.

When portability is essential, Pryco tank/trailers is a must. The tank, a sub-base tank (sold separately), is integrated into the design of the trailer. The actual design centers around the make and model of the gen-set and required total gross vehicle weight (GVW).

The trailer frame and tongue are formed with extra heavy 7-gauge steel. The fenders and step pads are made of heavy gauge formed steel. The step pads also include non-skid surfaces.

Standard equipment includes:

- * USDOT required lighting package:
 - Protected Brake Lights
 - Park Lights
 - Turn Lights
 - Side marker Lights
 - License Plate Bracket
- * 3-foot Heavy Duty Safety Chains
- * Sand Shoe Tongue Jack
- * Ball Coupler
- * Primer & Light Gray Enamel Finish or An Industrial Color Of Choice

Rugged, heavy-gauge steel protects brake lights, turn lights and rear amber lights. Other lights are recessed into frame and fender steps.
